

Blinkit e-commerce case study analysis

By Nithin

Blinkit at a Glance

Overview	Market Insights	Competitive Benchmarking	Business Model	User Persona	User Journey	Growth Loop	Areas to Improve
----------	-----------------	--------------------------	----------------	--------------	--------------	-------------	------------------

The Journey

- ✓ Founded as Grofers in 2013 by Albinder Dhindsa and Saurabh Kumar, Blinkit began with scheduled grocery delivery and quickly set its sights on being faster, smarter, and savvier.
- ✓ Pivoted in 2021 from a scheduled service to instant commerce—rebranding as Blinkit and rolling out its bold 10-minute delivery promise.
- ✓ Built around hyper-local dark stores, Blinkit covers a 2–5 km radius, offering high-frequency, convenience-driven items like fruits, snacks, personal care, and more.
- ✓ Evolving its playbook, Blinkit is switching from a marketplace to a fully inventory-led model—buying and stocking inventory itself from September 1, 2025, to boost control, quality, and margins.

By the Numbers

 \$13B Valuation	 2x Times Revenue YoY	 127% Growth YoY	 106M(Q3 FY25) MAU	 ₹635 AOV
 \$4.4B GOV	 125K+ Orders/Day	 1,301 Dark Stores	 172+ Cities	 5K+ Partnerships

SWOT Snapshot

**STRENGTHS**

- Market leader (46% share)
- Zomato/Eternal backing
- Dense dark store network
- Strong metro penetration

**WEAKNESSES**

- Thin profit margins
- High delivery costs
- Limited tier-2/3 reach
- Worker unrest issues

**OPPORTUNITIES**

- Expand Tier-2/3 cities
- 2,000+ store roadmap
- Cross-sell via Eternal ecosystem
- Rising digital adoption

**THREATS**

- Intense rivals (Zepto, Swiggy, Amazon)
- Regulatory scrutiny
- Sustainability concerns
- Safety & reputation risks

Levers of Success

- App engagement — Personalized discovery, gamification, AI-powered UX
- AOV uplift — Combos, cross-sell flows, family plans
- Retention — Loyalty programs, contextual reminders, meal-planning bundles
- Unit economics — Optimal store placement, dynamic pricing, delivery batching
- Ecosystem leverage — Integration with Zomato for bundled discounts and native flows
-

Business Model

Overview	Market Insights	Competitive Benchmarking	Business Model	User Persona	User Journey	Growth Loop	Areas to Improve
----------	-----------------	--------------------------	----------------	--------------	--------------	-------------	------------------

Business Model

Key Partners

- FMCG brands + suppliers and manufacturers
- Delivery partners and drivers
- Technology and payment service providers
- Brand partners for private label products

Key Resources

- Dark stores and warehouse infrastructure
- Delivery fleet and logistics network
- Technology platform (app and website)
- Local vendor and supplier relationships
- Brand partnerships and private label products

Key Activities

- Managing an online marketplace for groceries and essentials
- Maintaining inventory through dark stores/warehouses
- Order fulfillment and last-mile delivery (ultra-fast delivery focus)
- Customer service and support
- Technology platform development and maintenance

Value Propositions

Ultra-fast grocery delivery within

- minutes
- Convenience of shopping from home
- Wide range of products including fresh groceries, personal care, bakery, meats, flowers- (SKU- 2,000 to 8,000+)
- User-friendly app with features like order tracking, easy reordering, and flexible payment options
- Competitive pricing and subscription plans for discounted deliveries

Customer Relationship

- Self-service through app and website
- Customer support (order issues, cancellations)
- Personalized recommendations and reorder options
- Subscription plans for loyal customers
- Transparent order cancellation policy during packing

Channels

- Mobile app (primary channel)
- Website
- Social media and digital marketing
- Word of mouth and referrals

Customer Segments

- Urban Professionals & Families
- Young Adults (25-34 age group)
- Busy Consumers Seeking Convenience
- Local Retailers

Cost Structure

- Warehousing and inventory management
- Logistics and delivery operations
- Technology development and maintenance
- Marketing and customer acquisition
- Staff salaries and overheads

Revenue Stream

- Product margin from owned inventory (private label & purchased stock)
- Commission from seller partners (during hybrid model phases)
- Delivery fees (some offset by free-delivery thresholds)
- Retail media ad revenue (in-app banners, sponsored sections)
- Private label (Whole Farm) contributions (~20% per past sources)

User Persona

Overview	Market Insights	Competitive Benchmarking	Business Model	User Persona	User Journey	Growth Loop	Areas to Improve
----------	-----------------	--------------------------	----------------	--------------	--------------	-------------	------------------

Persona 1

USER DESCRIPTION:

Amit is a 30-year-old IT consultant living in Mumbai. With a busy job and long commute, he has little time to shop for essentials. He values speed and convenience over price, relying on Blinkit 2–3 times a week to quickly restock household items. Amit appreciates features like quick reordering and transparent pricing, but often feels he’s paying a premium for urgency. His main goal is to save time while keeping his home stocked without effort.

NAME	Amit
AGE:	30 years old
OCCUPATION:	IT Consultant
CHARACTERISTICS:	The Time-Crunched Urban Professional
LOCATION:	Bangalore
MONTHLY INCOME	INR 80,000
TECH SAVVINESS	High
PRICE SENSITIVITY	Medium

EXPLORES OTHER APPS	USAGE FREQUENCY
Yes (Zepto & Instamart occasionally)	2–3 times per week
NEEDS	FEATURES DESIRED
Fast, frictionless delivery for essential items	- Quick reorder experience based on past behaviour - Transparent pricing with no surprise add-ons - Smart add-on suggestions to build efficient carts
GOALS	CHALLENGES
- Save time while ensuring household staples are always stocked - Maintain order frequency without needing to browse each time - Balance convenience with cost-efficiency	- Service feels hidden, cost-efficiency not always clear (extra delivery/packaging charges, frustrating) - Lost in price fairness compared to competitors

QUOTE	I love the 10-min delivery, but I wish it didn’t always feel like I’m paying a premium for urgency.
-------	---

Persona 2

USER DESCRIPTION:
Priya is a 38-year-old homemaker from Noida who manages her household’s supplies with a budget-conscious mindset. She shops once a week, carefully comparing deals across platforms like BigBasket and Amazon Fresh. Priya values reliable product quality, clear pricing, and bulk savings. While Blinkit’s convenience appeals to her, she often feels it lacks guidance for value purchases and better deals elsewhere. For her, trust and cost-efficiency are top priorities.

NAME	Priya
AGE:	38 years old
OCCUPATION:	Homemaker
CHARACTERISTICS:	The Value-Seeking Homemaker
LOCATION:	Noida
MONTHLY INCOME	INR 40,000 (shared)
TECH SAVVINESS	Medium
PRICE SENSITIVITY	High

EXPLORES OTHER APPS	USAGE FREQUENCY
Yes (BigBasket & Amazon Fresh)	Once a week
NEEDS	FEATURES DESIRED
Budget-friendly offers and family-sized combo packs	- Clear communication of final prices (incl. delivery/fees) - Reliable quality and product availability - Simple navigation across household categories
GOALS	CHALLENGES
- Manage household supplies efficiently and economically - Maximise savings through smart offers & bulk deals - Ensure on-time delivery without quality compromises	- Often finds lower prices or better deals on other platforms - Feels the Blinkit app lacks guidance for value purchases - Hesitates to try new categories due to trust issues

QUOTE	“Why should I pay more when I can get it cheaper on BigBasket? I just need reliability and a fair deal.”
-------	--

Persona 3

USER DESCRIPTION:

Rohan is a 23-year-old MBA student in Hyderabad who relies on a modest stipend. Tech-savvy and highly price-sensitive, he frequently experiments with apps like Zepto. Using Blinkit 3–4 times a week, he looks for late-night access to snacks and essentials, gamified experiences, and student-specific offers. Rohan enjoys discovery through browsing and smart discounts, but finds Blinkit’s design less engaging than competitors. He wants the service to feel fun, rewarding, and affordable.

NAME	Rohan
AGE:	23 years old
OCCUPATION:	MBA Student
CHARACTERISTICS:	The Young Urban Explorer
LOCATION:	Hyderabad
MONTHLY INCOME	INR 15,000 (Stipend/Allowance)
TECH SAVVINESS	High
PRICE SENSITIVITY	Very High

EXPLORES OTHER APPS	USAGE FREQUENCY
Yes (Zepto, frequently)	3–4 times per week
NEEDS	FEATURES DESIRED
Budget-friendly offers and family-sized combo packs	- Gamified app experience with visible reward triggers - Real-time tracking, student-specific discounts, peer recommendations - One-tap reordering of frequently purchased items
GOALS	CHALLENGES
- Fulfil urgent needs conveniently at odd hours - Discover new items through browsing - Maximise savings through smart offers	- Blinkit feels bland compared to Zepto’s UI/UX - Doesn’t feel emotionally connected or rewarded - Often price hops between platforms for micro-savings

QUOTE	“Zepto just gets me, it feels faster, cooler, and rewards me for coming back.”
-------	--

User Journey

Overview	Market Insights	Competitive Benchmarking	Business Model	User Persona	User Journey	Growth Loop	Areas to Improve
----------	-----------------	--------------------------	----------------	--------------	--------------	-------------	------------------

Stage	User Actions	Emotions	Metrics	Strengths	Opportunities
App Launch & Home Feed	Opens app, sees banners, personalized feed	Happy / Neutral	App open rate, bounce rate, time on home feed	Smooth launch, personalized sections, trending items visible	AI-driven bundling to nudge faster cart building & improve AOV by grouping items based on time of day, user history, and seasonal patterns
Search & Browse	Searches for products, browses categories, uses filters	Happy	Search query success, clicks per session, bounce rate	Fast, accurate search results; easy category browsing	Voice/AI-powered search (“Find me keto snacks under ₹200”); cross-device continuity
Product Details	Reads details, checks price, reviews/nutrition info	Neutral / Happy	CTR → Add to Cart, product detail page views	Clear product info, pricing transparency, recipe-linked bundles	AR/AI product view (“see size compared to a bottle”), auto-compare with competitor prices
Cart	Adds/removes items, checks subtotal, sees nudges	Happy / Neutral	Cart size, avg. order value (AOV), cart abandonment rate	Smart nudges (“₹40 away from free delivery”), easy wishlist	AI-driven cart completion (“you usually buy milk with bread”), bundle deals
Checkout	Confirms address, delivery slot, payment method	Happy	Checkout conversion rate, payment success rate	Clear delivery time, multiple payment options, simple address input	AI-predicted checkout shortcuts (“1-tap reorder”), personalized payment offers
Payment & Delivery	Pays, sees order tracking, waits for delivery	Happy	Payment completion, refund/failed rate, avg. delivery time	Real-time tracking, delivery partner name/contact, ETA visible	AI-based delivery updates (“Your order is 3 stops away”), green delivery mode choice
Post-Order Experience	Views thank-you screen, sees ads, engages with order tracking	Neutral	Post-order engagement rate, ad impressions, tracking visits	Monetization via ads, real-time updates, ability to call delivery partner	Contextual offers on post-order screen (“Add dessert while you wait”), gamified wait experience

Designing Growth: Blinkit's In-App Playbook

Growth loops embedded in the user journey

Overview	Market Insights	Competitive Benchmarking	Business Model	User Persona	User Journey	Growth Loop	Areas to Improve
----------	-----------------	--------------------------	----------------	--------------	--------------	-------------	------------------

Product-Led Growth (PLG)

A growth strategy where the product experience itself drives user acquisition, engagement, retention, and monetization — rather than heavy reliance on sales or marketing.

Why it matters in Q-commerce

Speed of discovery, ease of ordering, and repeat usage patterns matter more than ads. The app is the growth engine.

Blinkit's unique play

Built around the 10-minute delivery promise, Blinkit's app funnels users from search → cart → pay → receive in seconds, making the experience habit-forming.

Blinkit isn't just fast delivery; it's designed for PLG—turning first-time trial into repeat, sticky usage.

CONSUMER BEHAVIOR INSIGHTS (TIED TO PLG)

- High-frequency, low-AOV orders (stickiness).
- Daily essentials = habit-forming use case.
- Gen Z & millennial preference for speed.
- Preference for trust (real-time tracking, refunds).

GROWTH LOOPS ENABLED BY THE APP

Loops At Work

Shaping User Perception: Blinkit's Landing Page

Delivery ETA → Reinforces Blinkit's 10-min promise → Visibility of System Status (Nielsen's heuristic) → Builds trust & reduces uncertainty

Address dropdown → Auto-picks + easy switch → User Control & Freedom principle → Convenience for multi-address users, prevents cart-drop friction.

Prominent Search with Voice Support – Easy-to-find search bar placed upfront, with a voice input option to make item discovery faster, hands-free, and accessible

Order Again (reorder shortcut) → Reinforces habit loops (cue → routine → reward) → Law of Least Effort → Maximizes repeat purchase frequency

Categories Tab → Hierarchical browsing option → Information Architecture principle → Supports planned shopping vs impulse discovery.

Zomato Integration → Ecosystem cross-link → Network Effects → Cross-sell between food delivery & q-commerce, strengthening Zomato's flywheel.

Blinkit Wallet → Prominent placement vs competitors → Strategic: lock-in refunds + prepaid value → Endowment Effect bias (users spend stored value faster) → Boosts repeat orders & loyalty

Dynamic Collections strip (Decor, Kids, Monsoon, Gifting, Premium) → Not fixed categories, but personalized micro-assortments → Uses Contextual Relevance + Miller's Law (limit to 6 tiles for cognitive ease) → Faster discovery, seasonal tie-ins, and emotional relevance → Drives impulse + habit loops

Personalization Layer-Frequently Bought Items → Category-curated repeat items → Hick's Law (choice overload reduced to 8 optimal options) + Habit Loop design (cue → routine → reward) → Enables 1-tap reorders, higher frequency, and larger basket size.

Print Section (new vertical) → Expands beyond groceries → Strategic adjacency expansion → Increases cross-category engagement & basket diversification

Brand Monetization Inside the App

Hero Banner Ad (on app open) → Prime real estate takeover by a single brand → Primacy Effect + Attention Economics → Maximizes top-of-mind recall & delivers high-value CPM revenue.

Shop by Brand (logo-led showcase) → Curated brand tiles driving recognition and trust → Recognition over Recall + Hick's Law → Simplifies choice, boosts brand-led discovery, monetized via sponsored shelf space.

Event Landing Pages (brand-themed microsite) → Full-page takeover with subcategories & curated flows → Thematic Grouping + Goal Gradient Effect → Maximizes dwell time & cross-sell, monetized via tenancy and bundled ad packages.

Brand of the Day → Daily spotlight on a single brand → Primacy + Recency Effect → Guarantees exclusive visibility window, monetized via fixed daily tenancy fees, strengthens brand recall, and drives repeat visits through freshness.

Category/Subcategory Spotlight → Brand featured within relevant category/ subcategory at decision point → Contextual Relevance + Moment-of-Intent Targeting → Nudge to add-to-cart at peak intent, funded via co-op and performance fees.

Branded Carousel (scrollable tiles → brand showcase page) → Storytelling surface for portfolios with multiple SKUs → Progressive Disclosure + Exploration Bias → Increases engagement depth, monetized via CPC/CPA on clicks & conversions.

Seasonal Sponsored Section (Monsoon) → Contextual bundles (must have's, self-care, home) powered by brands → Contextual Merchandising + Co-Branding Strategy → Drives impulse relevance and ad revenue through paid brand placements.

Behavioral Growth Triggers & Discovery Mechanics

Flat Deals → Straightforward discount-based bundles → Price Salience + Simplicity Heuristic → Appeals to value-seekers, nudges higher basket conversion

Lightning Deals → Limited-time offers with countdown → Scarcity Principle + Urgency Bias → Triggers FOMO, accelerates purchase decision speed

Price Drop Section → Highlights items with visible reductions → Anchoring Bias + Contrast Effect → Reinforces savings perception, boosts conversion rates.

Trending Near You → Geo-personalized popularity list → Social Proof Bias → Builds trust through community validation, encourages trial of high-velocity SKUs.

Featured This Week → Curated highlights refreshed weekly → Novelty Effect + Recency Bias → Keeps catalog dynamic, drives repeat visits for discovery.

Need-State Collections (e.g., Gym, Sleep, Travel, Digestion, Hygiene) → Problem-solution bundles curated across brands & categories → Jobs-to-Be-Done Framework + Thematic Merchandising → Drives impulse relevance, increases cross-category basket size, and positions Blinkit as a lifestyle solution, not just a grocery app.

Curated Navigation

All Categories + Subcategories (homepage) → Mirrors full catalog outside menu → Information Architecture + Hick's Law → Gives multiple entry points, reduces “menu-hunting” friction.

Shop by Store (Pet Store, Puja Store, etc.) → Thematic “mini-stores” → Thematic Grouping + Contextual Relevance → Helps users shop by occasion or lifestyle, increases cross-category basket building.

Personalized Discovery & Retention

Recommended Products (based on past purchase) → AI-driven recos → Collaborative Filtering + Recognition over Recall → Reduces search effort, drives habitual reorders.

Wishlist (on homepage) → Saves shortlisted products → Endowment Effect + User Control → Encourages return visits & repeat orders of saved items.

Frequently Bought (categorized tiles) → Repeatedly purchased items shown by category → Hick's Law + Habit Loop Design → Reduces search friction, reinforces daily-use routines, and accelerates reorders.

AI-Powered Recipe-Driven Engagement

Occasion & season-based recipes (e.g., mango shakes in summer, modak during Ganesh Utsav) → Contextually relevant content served at the right time → Contextual Relevance + Occasion Marketing → Enhances recall and buysability during cultural moments.

Ingredients list auto-add+share functionality → One-click cart add + easy recipe sharing → Endowment Effect + Social Virality → Lowers purchase friction and spreads app usage via word-of-mouth.

Recipe Rover (calculated meals to buy in minutes) → AI-generated, cookable recipes with linked ingredients → Generative AI + Vector Search → Extends engagement, simplifies meal planning, and directly drives incremental GMV

Recipe Rover Segmentation (Breakfast, Lunch, Cook-in-Minutes, Explore by Ingredient) → Multi-entry discovery paths (meal type, time, or ingredient) → Jobs-to-Be-Done + Personalization Heuristic → Aligns with diverse user intents (diet, time constraint, ingredient-first) and drives incremental basket adds.

Ingredient-Led Discovery (Vegetables, Paneer/Tofu, Meat, Fruits) → Curated recipes tied to chosen base → Contextual Relevance + Cognitive Ease → Appeals to health-conscious and diet-driven shoppers, reducing friction and boosting purchase of core fresh categories.

AI-Powered Recipe-Driven Engagement

Trust & Transparency

Nutritional Info (calories, protein, fat, carbs) → Health metrics shown upfront → Transparency Heuristic + Personalization Bias → Builds trust for health-conscious users, expands appeal beyond impulse buyers.

Ingredients/items Listed by Subcategory → Structured catalog-style listing → Information Architecture + Cognitive Ease → Connects recipes seamlessly to Blinkit inventory, lowering friction to cart add.

Discovery & Retention

Bookmark Recipes → Save favorites for later → Endowment Effect + User Control → Encourages return visits and habitual engagement with Blinkit app.

Recipe Tags (e.g., South Indian, Main Course) → Thematic labeling of recipes → Information Scent + Recognition over Recall → Simplifies exploration, improves relevance, and drives higher session depth.

AI-Powered Recipe-Driven Engagement

Tomato Rice

Tomato rice is a flavorful and tangy South Indian dish made with rice, tomatoes, and a blend of aromatic spices. It's a perfect one-pot meal that can be enjoyed for lunch or dinner.

Ingredients: Basmati rice, Tomato, Ginger garlic paste, Turmeric powder, Coriander powder, Mustard seeds, Curry leaves, Red chilli powder, Coriander, Salt, Onion, Cooking oil, Green chilli

280 kCal

Send a Hindi audio recipe

to your chef of the day and do thank them for the meal 🍽️

Share

Recipe Link Sharing (deep links to Blinkit) → Shareable recipe pages redirect into app → Viral Loop + Seamless Onboarding → Expands reach via social referrals, pulling new/returning users.

Audio Recipe Sharing → Shareable audio playback of recipes → Novelty Effect + Accessibility Principle → Adds delight, widens inclusivity, and strengthens Blinkit's "everyday utility" positioning.

Sharing & Virality

Category Architecture & Navigation

Multi-Tiered Categorization (Main → Sub → Child) → Hierarchical product structuring for ease of discovery → Reduces search friction & guides intuitive browsing → Improves SKU visibility and basket coverage.

Use-Case Prioritization (High-Demand First Ordering) → Categories arranged by purchase frequency (e.g., Rice above Dal, Fresh produce above Exotic/Frozen) → Demand-Weighted Merchandising → Ensures faster conversion and better user experience.

Use-Case Filters (Organic, Special Diet, Fasting, etc.) → Context-specific discovery paths → Micro-Segmentation Strategy → Caters to diverse shopper missions and boosts relevance.

In-Category Brand Monetization

Banner Ads & Sponsored SKUs inside Child Categories → Native ad placements directly within browsing journey → Mid-Funnel Brand Interception → Converts discovery into brand-led purchases.

Featured & Shop-by-Brand Sections within Categories → Embedded visibility inside subcategories → Deep Category Sponsorship Strategy → Guarantees brands presence at point of decision-making.

Private Label Play (Blinkit's "Whole Farm" Fresh Brand) → Own-brand assortment across staples & perishables → Vertical Integration Strategy → Improves margins and ensures supply reliability.

Product Discovery Mechanics

Tagging & Merchandising Nudges

Behavioral Shortcuts
(Bought Earlier at Top) →
Default merchandising
based on user's past orders
→ Retention-First UX →
Reduces reorder friction
and accelerates repeat
baskets.

Recipe-Linked Produce (e.g.,
Beetroot → Recipes) → Contextual
recipe nudges at product level →
Content-Commerce Convergence
→ Cross-sells multi-item baskets
via embedded journeys.

Image-Level Tags (Premium, Bestselling,
Trending, Fasting Special) → Visual nudges
overlayed on product tiles → Behavioral
Merchandising → Drives urgency, relevance,
and trust.

Description-Level Tags (Fresh, Organic, Low
Maintenance Plant, Flower Type, etc.) →
Functional descriptors in copy → Utilitarian
Guidance → Clarifies product attributes, helping
rational decision-making.

Sensitive Categories (Regulated Products)

Pan & Narcotics Section (Age-Gated, White-Labeled, No Ads) → Legal compliance through gated UX & de-branded listings → Silent Accessibility Strategy → Allows availability without overt promotion, minimizing regulatory risk.

Checkout Experience – Key Highlights

Wishlist Access+ Recently bought access in Checkout → Nudges users to add forgotten items → AOV (Average Order Value) booster tactic.

Reassuring Delivery Promise → Delivery time clearly shown at checkout → builds trust & reduces drop-offs.

Delivery Instructions for Edge Cases → Options like “Don’t ring bell, leave at door, leave with watchman” → addresses real-world last-mile pain points, improving both delivery efficiency & customer satisfaction.

Free Delivery Threshold Nudges → Dynamic prompt to “add X more for free delivery” → smart upsell strategy to lift basket size.

Post-Order Experience – Key Highlights

High-Impact Ad Real Estate → Prominent display/video ads on the order confirmation screen → prime monetization opportunity since users dwell here longer.

Enhanced Delivery Transparency → Live tracking with ETA, delivery partner details & direct call option → builds user confidence & reduces support calls.

Engagement Channels

Push Notifications

Real-time delivery updates, personalized offers, cart reminders, festival/event-based deals.

Blinkit can send with more context-aware nudges (e.g., “You usually buy milk on Sundays — reorder now?”).

In-App Messages & Banners

- Promotions (“Brand of the Day”), AOV nudges (“Add ₹50 more for free delivery”), contextual offers
- during browsing/checkout. Good for monetization + cross-selling.

Emails

- Weekly digests with trending products, seasonal recipes, “Top buys from your neighborhood.”
- Retention-oriented, but less real-time compared to notifications.

SMS/WhatsApp Alerts

- Order confirmation, delivery tracking, payment receipts.
- Utility-driven, but also builds reliability/trust.

Loyalty/Reward Triggers

- Gamified streaks, cashback updates, referral reminders.
- Currently stronger on Zepto; Blinkit can expand here.

Areas To Improve

Overview	Market Insights	Competitive Benchmarking	Business Model	User Persona	User Journey	Growth Loop	Areas to Improve
----------	-----------------	--------------------------	----------------	--------------	--------------	-------------	------------------

Areas to Improve

Initiative	What it is	Why it Matters / Expected Impact
“Ask Blinkit” AI Assistant	Conversational shopping: “cheap high-protein snacks under ₹200, add to cart”	Faster discovery, larger baskets, higher stickiness
Multimodal Search	Voice + photo of fridge/pantry → auto-suggest recipes + add missing items	Boosts add-to-cart from inspiration flows
Weekly Meal Planner → Auto Basket	Plan meals by diet/budget → one-tap basket creation	Habit loops, bigger planned orders
Nutrition & Allergy Guardrails	Real-time flags in cart (e.g., peanuts, sodium) + swap suggestions	Builds trust, reduces returns & regrets
Creator / Affiliate Program	Influencers create shoppable recipes, track sales, share ROAS	Low-CAC acquisition, wider reach
Post-Order Shoppable Ads	Transform confirmation screen ads into interactive/shoppable placements	Monetization + incremental add-ons
Sustainability & Eco-Delivery- Scheduled delivery	Opt-in green delivery slots + CO ₂ estimates	Improves brand image + lowers ops cost via batching
Accessibility & Vernacular UX	Regional-language voice shopping + Lite mode	Expands TAM across Bharat, improves conversion

THANK YOU
